

HYDRAULIC PRESSES

Accurate, Meets Various Application

Compact Hose crimping hydraulic press

- Robust pillar, H frame or C frame type.
- Meets various applications.
- Standard or custom designed to suit different needs.
- High quality electrical hydraulic components are used.
- Provided with manual of electrical controls.
- Programable logic control circuit are optional.
- Special decompression and bumping circuit.
- Structure designed to withstand higher over loads qualifies standard acceptance tests.
- Actuators / cylinder used are made out of tubes & seals of international standards.
- Easy to maintain.
- 2 to 400 tonnes pressing capacity.

APPLICATIONS

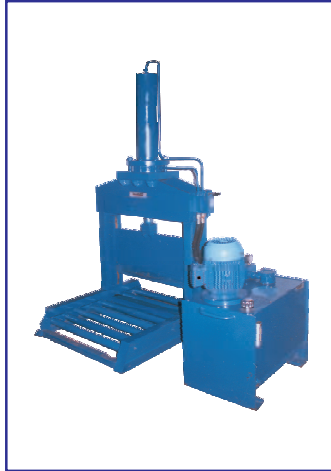

- Deep draw, punching crimping bending and straightening.
- Coining compacting & sintering.
- Concrete paver block & tile manufacturing.
- Rubber moulding & Bakelite mounting & briqueting.
- Wax, malt coffee & juice extraction.
- Cutting, forming, moulding of soft materials like carpets etc.
- Scrap bailing

Some of the important parameters required to design & offer a hydraulic press are Capacity - in tonnes, drawing of the components to be manufactured, production capacity, daylight, table size level of automation required, curing time, type of dies & tooling etc.

SOME OF THE HYDRAULIC PRESSES MADE FOR DIFFERENT APPLICATIONS

50T, 4 pillar type, moving platen hydraulic press for gasket forming.

30 T hydraulic press for rubber bail cutting

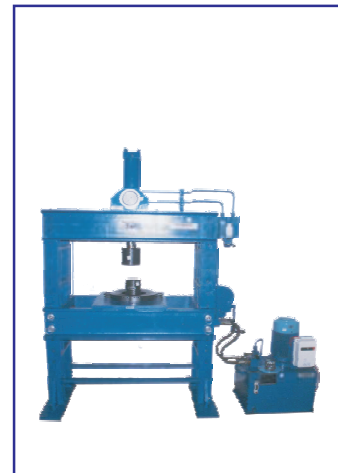

10 T straightening press

Automatic hydraulic press for pipe flaring

5T hydraulic press for bearing cage pressing

10 T adjustable table general workshop press.

2T, Two station hydraulic press for small component assembly & processing

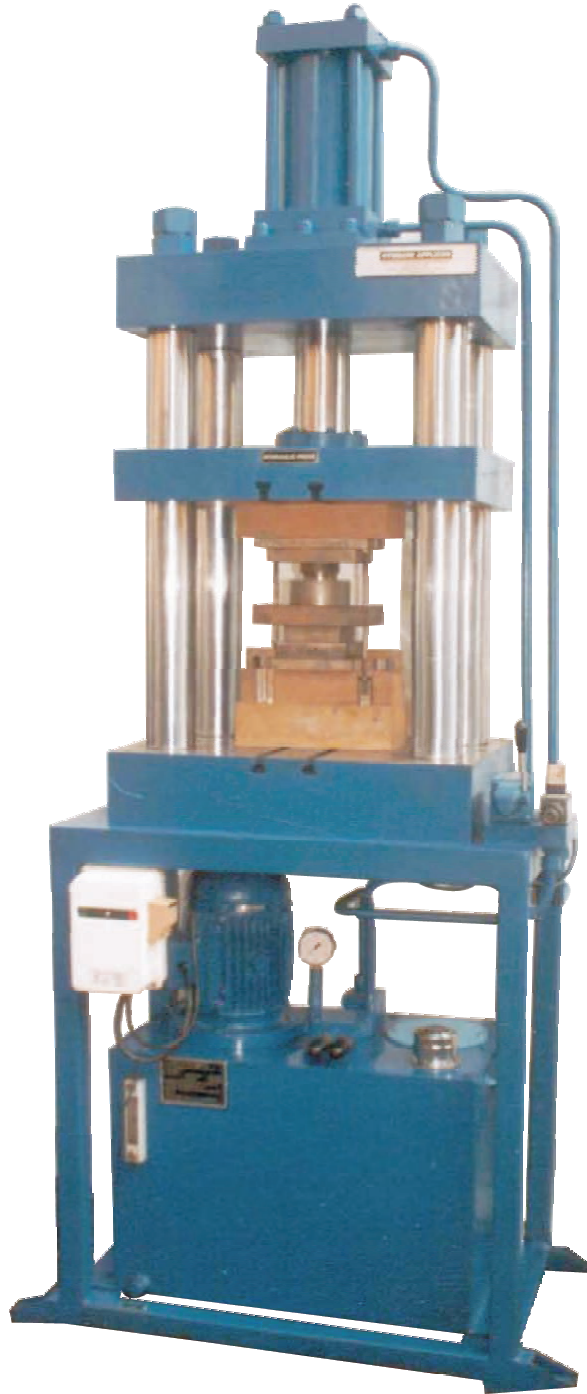

100 T hydraulic press for gold / silver coin manufacturing
